# 3. Shipbuilding shed (Schiffbauhalle)

One large shipbuilding shed is now under construction at this shippard. So far only the pillars and their foundations have been completed and the target date for having this major building half finished by 31 December 1951 cannot	25X1 25X1
possibly be met.	<b>ゴ</b> ~``
	7

# 4. Fitting workshops

Three fitting workshops (Nos. 5, 6 and 9) are also being built as extensions to the Warnowerft and this work is progressing according to plan; workshop No. 9 is almost certain to be completed ahead of schedule and the other two by 31 December 1951.

# 5. Docks

New docks and extensions to existing ones are to be finished by 31 December 1951. Work is progressing satisfactorily and this target date is not expected to present any difficulties.

# 6. Transformer Station No. II

This new transformer station was to have been completed by 31 July 1951. The housing was almost finished by 13 September 1951. Switchboards were then also under construction at subcontractors plants (not named) though these firms have reported difficulties in obtaining low tension and high tension switches. Six transformers are to be delivered by Transformatorenwerk, Oberschöneweide, Berlin, in late September or early October 1951, but this is dependent on the timely procurement of suitable sheet steel (h metric tons varying from 1 - 8 mm.) from SAG Marten, Thale.

#### 7. High tension power line extensions

Progress on the extensions to the high tension supply net of the Warnowerft has been seriously hampered by the lack of 31 km. of underground cables for which 48 metric tons of lead and 83 metric tons of copper have so far proved unobtainable in the DDR.

# 8. Other work in hand

Work is also under way on new coal bunkers, scheduled to be finished by 31 October 1951, and on the expansion of a number of office and store buildings. Additions are under construction on long distance heating, fencing, roads, railhead construction and canalization and water supply systems. Most of these minor tasks are progressing according to plan and should be completed by 31 December 1951.
